ROHIT MALLAPUR

.NET Backend Developer | Associate Software Engineer | Application & Production Support

📍 Bangalore | ✉️ rohitmallapur612@gmail.com | ☎️ +91 7026618277 | 🔗 Rohit Mallapur | 🔗 github.com/ROHITMALLAPUR

Summary

Associate Software Engineer with 2 years 9 months of experience in Application and Production Support, with hands-on experience in C#, ASP.NET Core Web API, SQL Server and REST API development. Experienced in developing backend APIs using Entity Framework Core, implementing JWT-based authentication and authorization, DTOs, dependency injection, middleware, validation, file upload handling and user-based data access. Strong production support experience across .NET applications, SQL troubleshooting, IIS deployments, incident management and root cause analysis.

Technical Skills

- **Languages:** C#, SQL
- **Backend & Frameworks:** ASP.NET Core Web API, .NET 10, Entity Framework Core, REST APIs, LINQ
- **Database:** Microsoft SQL Server, SSMS, Stored Procedures, SQL Queries, Data Migration Scripts
- **API & Security:** JWT Authentication, Authorization, BCrypt Password Hashing, Role/User-Based Access Control, CORS, DTOs
- **Development Concepts:** Dependency Injection, Middleware, Exception Handling, Model Validation, CRUD Operations, Async/Await
- **Application & Production Support:** L2/L3 Support, Incident Management, Root Cause Analysis, Troubleshooting, IIS Deployment
- **Security & Access Management:** SSO, SSL Certificate Management, Active Directory, SailPoint, RBAC
- **Cloud & Infrastructure:** AWS Migration Coordination, Server Management, System Monitoring
- **Tools:** Git, GitHub, ServiceNow, BMC Remedy, GitHub Copilot, Postman, Scalar
- **AI Tools:** GitHub Copilot, Claude, AI-assisted debugging and automation

Experience

Cognizant Technology Solutions, Bangalore

Associate Software Engineer — *Jul 2026 – Present*

Junior Software Engineer — *Dec 2024 – Jul 2026*

Software Engineer Trainee — *Dec 2023 – Dec 2024*

- Developed and implemented FY27 Property Tax Rollover enhancements using C#, .NET, and SQL Server (SSMS), automating annual tax data rollover processes and business rule validations.
- Enhanced the Property Tax application with data cleanup, year rollover, due date updates, and status reset functionality, reducing manual maintenance effort for the business team.
- Designed and developed an Excel export feature for the Maintenance Locations module, improving reporting and data accessibility for business users.
- Optimized SQL Server data processing scripts supporting yearly tax package rollover activities, ensuring data accuracy across tax schedules.
- Collaborated with business stakeholders to analyze requirements, resolve rollover data issues, and deliver production-ready .NET application enhancements.
- Performed targeted SQL insert/update operations on a critical treasury/trading system to unblock stuck trades and ensure smooth trade execution during time-sensitive production issues.
- Provided L2/L3 Application & Production Support for 2 critical and 20+ enterprise web applications, including financial systems, managing 20+ incidents per week via ServiceNow and BMC Remedy with average resolution within 48 hours.
- Performed Root Cause Analysis using logs, SQL queries, and code tracing; debugged .NET (C#, ASP.NET) applications and resolved production defects.
- Performed Change Management by creating and managing Change Requests (CRQs) for production deployments, enhancements, and upgrades, ensuring approvals, scheduling, and risk assessment were completed prior to implementation.
- Managed IIS deployments (service restarts, code updates, validation), configured SSO/SSL certificates, and handled user access via Active Directory and SailPoint (RBAC).

- Collaborated with AWS teams during migration activities, contributed to Disaster Recovery planning and testing, and participated in server lifecycle activities.
- Adopted AI-assisted tools (GitHub Copilot, Claude) into daily support and development workflows to speed up debugging, script writing, and issue triage.
- Proposed an AI-based automation concept for duplicate incident detection and auto-cancellation using BMC Remedy ticket data; pitch was adopted by the team, reducing redundant incidents.

Projects

Smart Knowledge Hub — ASP.NET Core Web API 🔗 github.com/ROHITMALLAPUR/SmartKnowledgeHub

- Developed a RESTful backend API using ASP.NET Core Web API and Entity Framework Core for document management.
- Implemented complete CRUD operations using a Controller → Service → DbContext architecture with dependency injection.
- Integrated SQL Server with Entity Framework Core and managed database schema changes using EF Core migrations.
- Implemented JWT-based authentication and authorization with user registration/login and BCrypt password hashing.
- Implemented user-based data ownership, ensuring authenticated users can access and modify only their own documents.
- Developed DTO-based API contracts with model validation to control request and response data.
- Implemented custom middleware for request logging and centralized exception handling with appropriate HTTP status codes.
- Built secure multipart file upload functionality with file type and size validation, generated storage filenames, and physical file cleanup on document deletion.
- Configured CORS to support communication between the ASP.NET Core API and an Angular frontend.
- Tested APIs using Postman and Scalar and maintained the project using Git/GitHub.

Education

PES University, Bangalore
Master of Computer Applications | Dec 2021 – Oct 2023
- GPA: 7.68/10.0

MES M.M. Arts and Science College, Sirsi
Bachelor of Science (PMCS) | Jul 2018 – Nov 2021
- Percentage: 74.02%
